

MovieStar HD

New Plasma Range

**42" Ready for
High Definition
50" Television**

Dream Vision[®]

With DreamVision MovieStar plasma TVs, you will enjoy your first real High Definition experience !

The MovieStar 42 HD comes with a performing Input Selector Box, brilliantly achieving both video processing and TV tuner tasks.

The **Text Improvement** distinguishes text and images and processes the text data to make it sharper and clearer. Henceforth, reading movie subtitles or watching your favourite computer OSD will no longer be a torture for the eyes.

Before After

The **ambient light sensor** automatically adjusts the brightness of the screen to the light of the viewing environment. Making watching your TV more comfortable for the spectator's eyes.

With the **Cat's Eye View**, black hair, dark shadows and trolls of the cave have never looked so amazingly detailed !

The **«Fine Mode» equalizer** automatically adjusts the display's emitted light depending on the movie's sudden changes. For example if the movie scene leaves a dark room for an outside sunny place, the display will automatically dim the brightness so that the spectator does not get dazzled by the sudden illumination.

The **24/30-frame Mode** automatically makes the difference between films shot at 24 frames/second and films shot at 30 frames/second. It progressively sets the output in order to restore the experience of watching the original movie .

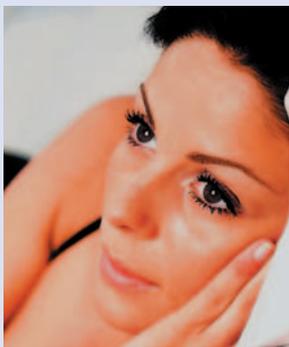

Forget the Material
Get into the Movie

The **Automatic Edge Corrector** is able to separate High Definition TV programs or DVD signals into their components. After applying an «edge correction», the boundaries of people or objects become smoother, producing a clear and clean image.

The **Digital Controller** automatically adjusts gain, gamma and gradation so that the display outputs a extremely natural and realistic image.

BEFORE

AFTER

The **Digital Noise Reduction Program** can detect and obviously remove any digital noise from a digital program or a DVD movie. The image then becomes cleaner and more realistic.

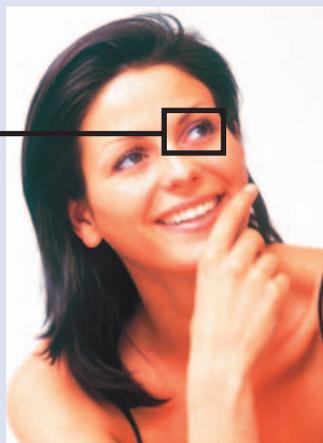

The **Natural Colour Enhancer** is able to recognize the specific hues of grass, sky, skins or water and increase their tone to make it look more real.
